Description of the activity

The project entitled “*Advocacy to enhance governance for the climate-vulnerable people in Bangladesh (Phase-2)*” is implemented by the Network on Climate Change in Bangladesh (NCC, B) in collaboration with project partner Nabolok, funded by Bread for the World, the globally active development and relief agency of the Protestant Churches in Germany. This project became operational in January 2019 for the 2nd Phase that is vocal on to address issues to climate change and climate justice at local, national and international levels and aims to accelerate the united efforts of NGOs, CSOs and Media in facing challenges induced by climate change.

Network on Climate Change in Bangladesh (NCC,B) is requesting all relevant and highly qualified companies or consultants with significant work records and experience in documentary film making. This activity would be rewarded under its ongoing project ‘*Advocacy to enhance governance for the climate-vulnerable people in Bangladesh (Phase-2)*’ with financial support from the Bread for the World (BFTW), Germany.

Beyond all dispute, globally Bangladesh is frequently cited as one of the most vulnerable countries to the impacts of global warming and climate change. The main causes that are reported for its vulnerability to climate change are of its disadvantageous geographic location; flat and low-lying topography; high population density; high levels of poverty; reliance of many livelihoods on climate sensitive sectors, particularly agriculture and fisheries; and inefficient institutional aspects. Every year devastating floods, cyclones and storm-surges, salinity intrusion, erosion, precipitation changes linked to climate change are threatening the lives and futures of millions of people in Bangladesh and forcibly displaced from their home of origin. National and international policy responses has been adopted to manage adverse effects. Challenges associated with climate change in Bangladesh is never ending. However, fruitful actions that mitigate the impacts of climate variability in general, make vulnerable people more resilience, is needed to combat climate change and its impacts.

Objective of the study

Video documentary is a popular and powerful tool to narrate the actual climate change situation from the grassroots and provide a strong evidence for effective solution. The documentary intends to investigate the climate change impacts in Bangladesh on different sectors such as agriculture, health, water, energy etc. The documentary will address recent climate change implications on different sectors in Bangladesh and delineate the concern issues for national and global dialogues to cope with the adverse effect of climate change.

Expected participation

NCC'B seeks to appoint a dynamic and highly skilled media house/company or consultant with significant work records and experience in climate change related documentary film making. The media house/company or consultant will be responsible for script developing and finalizing the documentary with close consultation to NCC,B Secretariat team lead in the given timeframe.

Expected outcome of this activity

The documentary will create mass awareness and increase public understanding on climate change vulnerabilities and impacts. It will visualize specific local needs and concerns in order to create significant impact on the national as well as global societies and the policy guideline. The major concern is to make a documentary that will draw proper attention of the policy makers, public leaders and most importantly recommend a set of roles and responsibilities by experts, emphasizing different ministries and stakeholders to create pressure to take affirmative initiatives for climate vulnerable people to make them more resilient in order to combat climate change.
